

Platform Integrations

CENTRALIZED REGULATORY DATA

HData supports integrations with common file management systems. This enables streamlined and secure access to your organization's documents within the HData platform, allowing you to more easily leverage the powerful capabilities of Regulatory AI with documents that are not publicly available.

Data integrations in the HData platform:

- Sync files automatically between connected environments and HData
- Give you full control over user permissions for every connection
- Empower you to use Regulatory AI for comprehensive analysis on proprietary documents along with the millions of public filings available in the HData Library

HOW TO CONNECT AN INTEGRATION

HData will partner with you and your IT team to connect integrations. We'll collect your requirements for the folders and files to sync, and map connections as drives within the Data Hub of the HData platform. Files are then available as read-only, and cannot be modified, moved, or altered within HData.

Enterprise-Ready Connections

Get Started with an Integration

Contact your Customer Success Manager
or email support@hdata.com
to request a data integration.
