

Data Request Management

High volumes of discovery requests strain manual processes, creating risk of delays and information inaccuracies. HData's latest technology supports teams with clarity, transparency, and efficiency in data request responses and workflows.

Automation & Intelligence to Streamline Responses

- ✓ Centralize historical data requests via file upload or integration
- ✓ Automatically generate responses to new requests that align with previous answers
- ✓ View supporting materials to validate answer sources and accuracy
- ✓ Collaborate on drafts, reviews, and approvals across your organization
- ✓ Track response activity, status, and deadlines

Reduce the Burdens of Manual Data Request Management

ACCELERATE RESPONSE TIMES

Reduce manual work in spreadsheets and emails. Generate AI-powered draft answers, and manage all deadlines from one central location.

INCREASE ANSWER CONFIDENCE

Ensure responses are consistent with historical answers. Avoid rework when needed responses already exist, and get full visibility into underlying data sources.

PRESERVE INSTITUTIONAL KNOWLEDGE

Build a central, searchable repository of data request responses and subject matter expertise, with a complete audit trail of all user activity across the organization.
