

Regulatory Intelligence for Data Centers and Digital Infrastructure

Important energy regulatory signals for data centers live inside utility rate cases, interconnection proceedings, and IRP filings that are dense, disparate, and time-consuming to analyze.

HData helps developers, hyperscalers, and colocation providers navigate the energy regulatory landscape, enabling faster and more confident decisions on power procurement, site selection, and grid access.

HData Combines Centralized Regulatory Data with Powerful AI and Purpose-Built Tools to Accelerate Analysis

INTERCONNECTION & QUEUE INTELLIGENCE

Track interconnection queue status, study cluster updates, and withdrawal activity across RTOs/ISOs.

SITE SELECTION & CAPACITY AVAILABILITY

Before committing to a new market, assess whether power is actually available and on what timeline. Surface signals from IRP filings, generation retirement notices, transmission expansion plans, and utility load forecasts filed at PUCs.

RATE RISK & POWER COST MONITORING

Track rate cases, transmission cost allocation proceedings, and large load tariff filings across utility territories to monitor for cost exposure.

DUE DILIGENCE & DEAL UNDERWRITING

Rapidly assess the regulatory and utility environment in target markets, including rate case history, pending proceedings, interconnection feasibility, and jurisdictional stance toward large industrial loads.

Regulatory Intelligence for Data Centers and Digital Infrastructure

Platform Capabilities and Features

CENTRALIZED REGULATORY DATA

Library including 50 state PUCs, FERC, ISO and RTO committees, IRPs, transmission plans, and legislative data

COMPREHENSIVE COVERAGE

More than 20 million filings dating back to first public availability with daily data refreshes

GLOBAL FILE & DOCKET SEARCH

Advanced search and filtering to cast a wide information net or pinpoint specific entities and topics

SECURE FILE STORAGE

Upload or integrate proprietary files and data sources with enterprise-level, SOC-certified data protection

AI-POWERED ANALYSIS

Query up to 400 files at once in a grounded environment with all AI-generated responses validated using detailed source citations

REGULATORY MONITORING

Customize notifications for regulatory developments and new filings by docket, entity, jurisdiction, or topic
